PROJECT OVERVIEW

What is HealthNest?

HealthNest is a SaaS-based Doctor Appointment Booking system. Patients can search for doctors, check their available time slots, and book an appointment online. Doctors can manage their profile, set their available slots, and track their appointments. Admins can manage the whole platform — doctors, patients, and bookings — from one dashboard.

Why We Picked This Idea:

Booking a doctor's appointment usually still means calling the clinic or waiting in person. We wanted to build something that solves that everyday problem — a simple online system where a patient can find the right doctor and book a slot in a few clicks, and the doctor can manage their day without paperwork.

TECH STACK

React (Vite) • ASP.NET Core Web API • PostgreSQL • SignalR • Vercel • Render
--

MAIN FEATURES

- **Three User Roles:** Patient, Doctor, and Admin, each with their own dedicated dashboard.
- **Patient Side:** Search doctors by specialization, view live slot availability, book appointments, and track status.
- **Doctor Side:** Manage profile, add time slots, confirm/complete/cancel appointments, and live patient queue.
- **Admin Side:** Manage all doctors and patients, view every appointment, and analytics dashboard with charts for bookings, revenue, and top doctors.
- **AI Symptom Checker:** A patient describes their symptoms in plain text and the system suggests which specialist to see.
- **Real-time Notifications:** Instant notification using SignalR when a patient books, with no page refresh required.
- **Live Queue:** Patients check in online and see their position update live.
- **Responsive Design:** Works on desktop, tablet, and mobile, with light and dark mode support.

HOW IT WORKS

1.

LIVE DEMO & TEST LOGINS

WEBSITE URL

Patient registers and searches for a doctor by specialization.

2. Sees doctor's available time slots in real time.
3. Books a slot — doctor is notified instantly.
4. Doctor confirms, completes, or cancels from dashboard.
5. Patient checks in online to see live queue position.
6. Admin monitors doctors, patients, and revenue.
